

IMTA Equipment Condition Grading Standard No. 12

(2025)

International Machinery Traders Association — Reference standard for classifying the condition of used and refurbished industrial machinery offered on trading platforms.

1. Purpose

This Standard defines the controlled condition vocabulary used by Sellers when listing machinery and by inspectors when certifying it. Consistent grading reduces information opacity between Buyer and Seller in markets where units are geographically dispersed and cannot be co-inspected.

2. Condition Designations

Designation	Criteria	Hours / Wear	Warranty
New	Unused, current production model	0 hours	Full OEM warranty
Used	Operational, sold as-is	Disclosed hours, normal wear	None / as-is
Refurbished	Repaired and certified to spec	Reset/serviced components	Limited refurb warranty
Parts Only	Non-operational	Salvage	None

3. Inspection Dimensions

An inspection certificate shall record the following dimensions: operating

hours, structural integrity, hydraulic condition, engine emissions tier, tyre/track wear percentage, and presence of original documentation. Each dimension is scored Pass, Conditional, or Fail.

4. Machinery Categories Covered

Construction; Agriculture; Manufacturing / CNC; Material Handling; Mining; Power Generation; Forestry; Oil & Gas.

5. Emissions Classification

Diesel-powered units shall declare an emissions standard: EPA Tier 2, EPA Tier 3, EPA Tier 4, or EU Stage V. Units failing to meet the destination market's minimum tier may be restricted from import.

6. Certifications Referenced

ISO 9001 (Quality Management); CE Marking (EU conformity); OSHA Compliant (US workplace safety); EPA Tier 4 (emissions). A unit's listing should declare which certifications apply.
